### DETAILED ACTION

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding Claim 1, line 4, it is unclear what is meant by "a bandwidth low frequency tuned reflector". How does a reflector have such a characteristic? Is it resonant? Does this terminology imply that the reflector has "low bandwidth"? What is "low" bandwidth as opposed to "high" bandwidth?

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gegan (4692769).

Regarding Claims 1-3, Gegan shows in Fig. 1, a planar broadband patch antenna comprising a ground plane (unnumbered in Fig. 2) and patch radiator 10 for radiating in a first frequency A and a radiating slot 24 that creates an additional resonant frequency B. Slots 26 and 28 are also shown within the patch for tuning the input impedance of the antenna. It would have been clear to

a skilled artisan that the slots 26 and 28 have resonant frequencies as all slots having a dimension within a patch exhibit. Thus, a skilled artisan would have found it obvious that the slots 26 and 28 provide additional frequencies. The feeder 16 (and 32 in Fig. 3) is a strip line coupling as claimed.

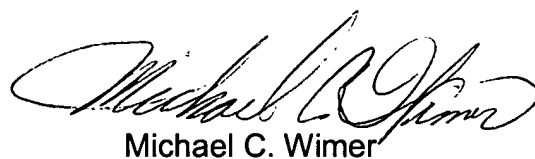

***Allowable Subject Matter***

5. Claims 4-7 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael C. Wimer whose telephone number is (571) 272-1833. The examiner can normally be reached on M-F.
